Project Abstract Submission Form

Sec No-12	Team No- 05	Project Title-Sign Language Translator App
------------------	--------------------	---

1. Abstract

Sign Language Translator App

The Sign Language Translator App is a database-driven application designed to help communication between sign language users and people who do not understand sign language. The system stores information about users, sign language gestures, their meanings, categories, and translation records in a structured database. Users can register and log in to the application, search for signs, and obtain the corresponding meanings or translations. The database manages user details, sign information, and translation history efficiently while maintaining data consistency and reducing redundancy. The system can also support the addition and updating of new signs and their meanings. DBMS concepts such as tables, primary keys, foreign keys, relationships, normalization, SQL queries, and data retrieval are used to manage the application data. The project demonstrates how a database can be integrated with a sign language translation system to provide an organized, accessible, and efficient communication platform.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520090004	Lahari	
2520090152	Devaji Rashmika	

3. Frameworks / Platforms / Software Used

(List the frameworks, libraries, platforms, or tools you plan to use.)

- **Frontend:** HTML, CSS, JavaScript
- **Backend:** Java / Spring Boot
- **Database:** MySQL
- **Database Connectivity:** JDBC
- **Development Platform:** Visual Studio Code / IntelliJ IDEA
- **Web Server:** Apache Tomcat
- **Version Control:** Git and GitHub
